

“What initially attracted me to Devon was the extent of their community involvement; they’re a company that really understands how important it is to give back. I immediately knew I’d made the right decision. They do their utmost to create a great learning environment and you’re actively encouraged to learn about things outside of your focus.”

## Information Technology Co-op Student

Devon Canada Corporation is an experienced senior player in Heavy Oil, with more than 20 years of cold flow heavy oil production in the Lloydminster and Bonnyville regions of Alberta. In the Athabasca oilsands region of northeastern Alberta, best-in-class Steam Assisted Gravity Drainage (SAGD) heavy oil operations have led to exponential growth in Jackfish 1, 2 and 3, exceeding 100,000 BOED of production. Devon Canada knows heavy oil - and it’s what we do best. We pioneered using saline water in the SAGD process, completely eliminating the use of fresh water in our operations and we have the most rigorous wildlife monitoring program in the industry. We are committed to maximizing our assets and finding solutions to help us work faster, safer and better. For seven straight years, we’ve made the list of Fortune’s 100 Best Companies to Work For. Just watch where we go from here. [www.devonenergy.com](http://www.devonenergy.com)

This 8-month co-op student position will provide a well-rounded IT experience with opportunities to learn about multiple roles. The position will commence on May 1, 2018 and is based in Calgary, Alberta.

### Duties & Responsibilities

#### Analyst

- Participate in requirement gathering sessions with stakeholders
- Become familiar with Devon’s SDLC (System Development Lifecycle) through the documentation of Opportunity Evaluations, Business Cases, Business Requirements, Process Flows and Diagrams
- Learn and understand Cloud integration tools, concepts, methodology and migration process
- Document and inventory integrations, schedule jobs, workflows and mappings for the Cloud migration processes
- Work with stakeholders to identify opportunities for enhancements, and facilitate the creation of changes to existing or new workflows and establish related best practices

#### Developer

- Participate in design, build, coding, testing and deployment of integration into the Cloud Intergration Platform
- Work with business analysts and technical architects to formalize specifications for custom development
- Attend Knowledge Transfer sessions for all custom work developed prior to release of their duties from the projects
- Develop and enhance custom solutions using approved technologies and platforms
- Document and perform unit, string, integration, and regression testing in support of new implementations and releases
